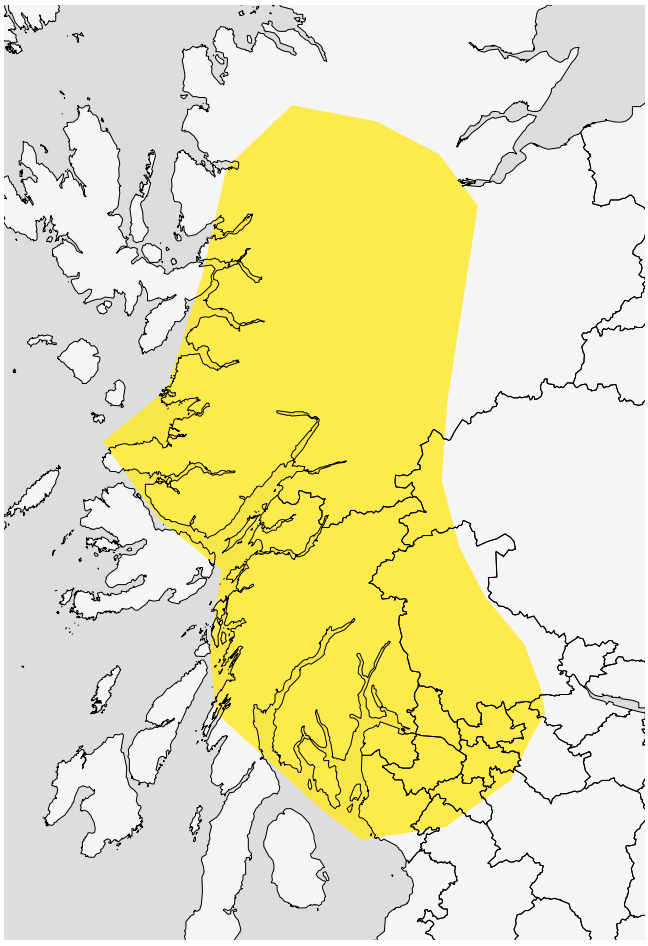
Yellow warning
Rain

Between
06:00 Tue 10 Oct 2023 and
21:00 Tue 10 Oct 2023



Heavy rainfall will affect parts of western Scotland on Tuesday, bringing a risk of some additional flooding and transport disruption.

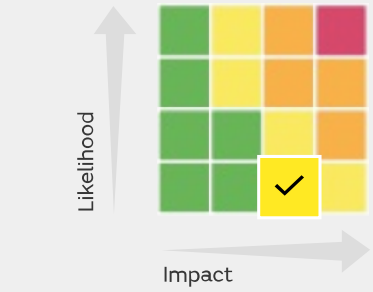
What to expect

- Spray and flooding could lead to difficult driving conditions and some road closures
- Where flooding occurs, there is a slight chance of delays or cancellations to train and bus services
- There is a small chance that homes and businesses could be flooded, causing damage to some buildings

Further details

Following disruptive rainfall across much of Scotland in recent days, a further period of fairly heavy rainfall is likely to affect many western parts of Scotland during Tuesday (though nothing like the amount seen on Saturday), before the rain begins to clear away southwards during Tuesday afternoon and evening.

Across many western areas 15-25 mm of rain could fall quite widely, with peak totals of 40-50 mm possible over and around the high ground. This may bring further impacts from flooding, including the disruption of travel, given the recent wet conditions.



Very low likelihood of medium impacts
